Abstract

The counseling of making floor cleaner for household use is done by the service team to help housewives in dealing with household income constraints and in an effort to reduce the effects of rising inflation on household consumption goods.

This community service team is carried out in the form of counseling to make floor cleaners and glass cleaner for household use and can also be used for home industry. So that this activity is expected to be able to help the difficulties of the economic crush due to rising prices of household consumption goods.

This service is expected to help households to be able to produce home industry products so that it has the potential to be developed on a larger industry scale.
CHAPTER I
INTRODUCTION

1.1. Situation Analysis.

Households are part of the environment in an area both in the village or village that can affect the success or success of development in a particular area. The central statistics agency released that Indonesia's economic growth has increased from 5.03% in 2016 to 5.07% in 2017 (https://ekonomi.kompas.com/read/2018/02/05/130300426/kons-rumah- stairs-discordant-half-structure- economy-indonesia). The growth of the Indonesian economy is due to the support of the household expenditure component, which is 2.69%. This data shows that household expenditure contributes to Indonesia's economic growth.

The inflation indicator of 4% in 2017 and 4.2% in 2018 is a problem for households (https://www.jawapos.com/ekonomi). This shows that the increase in per capita gross domestic product by Rp. 51,000.00 per year or by Rp. 4,250,000 did not help households solve the problem of household consumption due to a significant increase in inflation.

Inflation contributions such as the increase in electricity tariffs, fuel oil, and the cost of producing household consumption goods of more than 5% are no longer able to meet basic household needs, especially mediocre families with provincial minimum wage income (UMP).

Housewives must be wise in dealing with conditions that increasingly create their own difficulties. Balancing the household budget by planning household consumption wisely is the key to successfully addressing the problem of household consumption. In addition, household entrepreneurship opportunities through empowering the production of goods in the household can also reduce household financial problems.

Household efficiency through household consumption such as the use of floor cleaners is through self-production and producing floor cleaners for sale is one of the solutions to household financial problems.
This dedication team plans to provide training on making floor cleaning at a low cost that can be used alone and can even be produced for sale so as to save on household spending, while using commercial floor cleaners when cleaning floors can contribute to indoor air pollution, which can cause a big problem for people with asthma or allergies. Commercial floor cleaners also leave toxic residues, which can cause other dangerous health conditions, which endanger family members. Making homemade floor cleaners is not only safer, but also relatively inexpensive to produce.

The danger of commercial floor cleaners is because many companies that manufacture floor cleaning products do not disclose their ingredients on labels. As a result, it is not known whether commercial floor cleaning products contain volatile organic compounds (VOCs) which can cause irritation or even potentially cancer.

1.2. Problems.

The effects of inflation which make it difficult for finances and household budgets make housewives have to make accurate strategies so that financial problems can be overcome. Alternative solutions include:

1. Make an efficient RPBRT (household expenditure and expenditure plan), arranged according to priority needs.

2. Avoid using loans (debt) when the expenditure budget is greater than the income budget.

3. Trying to empower various knowledge to generate and increase household income.

4. Self-produced various household products by making their own products that are more natural and free from the use of hazardous chemical compounds.

The choice of empowering housewives' knowledge to generate household income is the right solution. Commercial floor cleaning products are household consumption that cannot be
avoided and this product is well understood by housewives. Commercial floor cleaning products can actually be produced by themselves because the manufacturing process is very simple at a low cost. This dedication team wants to provide counseling on the problem:

1. How to make or produce a natural floor and glass cleaner for your own use.
2. How to make or produce natural floor and glass cleaners for sale and generate additional household income.

1.3. Purpose of Activity
After the implementation of the extension activities, the expected outcomes are:

1. Understanding the process of making natural floor and glass cleaners for household use.
2. Understanding the production process of natural floor and glass cleaners for sale

1.4. Benefits / Use of Activities
While the usefulness of this service activities are:

1. Helping households in urban villages to be able to improve budget efficiency.
2. Helping households in Meruya to be able to produce natural floor cleaning products that can generate additional household income.
CHAPTER II
TARGET AND OUTCOME

1.1. Target.

The socio-economic system of urban communities has forced households to have the need to use natural floor cleaners that can help complete household chores while maintaining health, which also helps generate additional household income.

Making natural floor cleaners is very easy and can save expenses. If accustomed to taking care of the household, cleanliness in the household as if it never runs out. That is why natural floor cleaners are so important. Indeed, households should not use clothes detergent to clean the floor, because it will cause a large residue. To be more economical, households can make simple natural floor cleaners themselves at home.

How to make a natural floor cleaner is a way to run a home craft industry. Natural floor cleaners are more commonly known as clear and colored viscous liquids that function to clean the floor. before, to clean the floor of the traditional community using coconut pulp and also ashes. But along with the times, today's society has been using ready-to-use floor cleaners with various forms and advantages of each.

There are three types of natural floor cleaners based on their physical abilities, which are: Liquid form, because it is more practical and has a distinctive aroma making natural floor cleaners have more value than others.

Once the prevalence of the use of natural floor cleaners, the sales are very high in the market because of the very affordable price, also because of the results in cleaning the dirt, especially the fat attached to the floor. There are even various brands and scent variants that can be chosen as needed. However, the thing that should not be forgotten in choosing a product is its safety for health. So, as a household consumer must also be very clever in choosing safe products..

The materials needed can be purchased at a chemical store. Making a simple, natural liquid floor cleaner does not require complicated methods and the ingredients are easily obtained at a relatively cheap price. To make a natural household liquid floor cleaner requires, among others
How to make a simple, liquid natural floor cleaner is quite easy. Depending on the floor to be cleaned: How to Make Homemade Floor Cleaners

1. General Purifier
2. Homemade Wood Floor Cleaners
3. Disinfectant Floor Cleaner for Bathroom
4. Homemade Laminate Floor Cleaners
5. DIY Vinegar Floor Cleaner
6. Homemade Natural Floor Tile Cleaners.

1. General Purifier

- Home Made Multipurpose Floor Cleaner
- Two glasses of warm water
- ½ cup white vinegar
- ¼ cup rubbing alcohol
- Three drops liquid dish soap (make sure it does not contain antibacterial, moisturizing, or oxygen bleach)
- 5 - 10 drops of essential oils (like peppermint oil)

This fantastic cleaner will work on every hard floor surface in your home. This will work on hardwood floors, laminates, vinyl floors, linoleum, and tiles. Be careful to use it to clean marble and granite, because vinegar can damage porous stones. It's a powerful cleanser to remove impurities and make beautiful sparkles.

Mix the ingredients in a large bowl. Add to the plastic or glass spray bottle and shake well. Spray the cleaner on the floor and wipe with a mop. You can also combine ingredients in a bucket, but you must dispose of food scraps after cleaning the floor.

2. Homemade Wood Floor Cleaners

Hardwood Floor Cleaner
• One gallon of hot water
• ¾ cup olive oil
• ½ cup lemon juice

With our artificial wood floor cleaner, you can use warm water and a mop to clean the floor every day. If the wood floor is dirty, you can use this recipe to clean it. This formula doubles when polishing your floor, leaving it with a beautiful natural luster.

Mix ingredients in a bucket. Using a carefully squeezed mop, apply the solution to the floor. Allow to air dry. Hot water and lemon juice clean the floor, while olive oil works to polish it. You do not need to rinse it after finishing mopping, after drying your floor will look good.

3. Disinfectant Floor Cleaner for Bathroom

Disinfecting Bathroom Floor Cleaning Recipes
• 1 gallon hot water
• Bor Borax cup

For floors that need to be cleaned and disinfected regularly, such as cleaning bathroom and shower tiles, this is a good homemade bathroom cleaner that does disinfecting very well. The recipe uses Borax, which you can buy at your local grocery store, in the laundry aisle or online. In a mop bucket, mix water and borax and stir until smooth. Dip the mop in the bucket and wipe the floor. Borax is great for cleaning even the dirtiest mess.

4. Homemade Laminate Floor Cleaners

Homemade Floor Lamination Cleaner Recipes
• 2 cups of hot water
• 2 cups vinegar
• 5-10 drops of your chosen essential oil
Laminate floors are relatively easy to care for, but sometimes you might need to clean up clutter that requires a little cleaning power. If you use the wrong type of cleaning product, it can damage the coating on the floor. This homemade laminate floor cleaner will clean the laminate floor without damaging it.

Mix the ingredients in a mop bucket or spray bottle. Using a clean mop, soak in solution, then start your laminate floor mop. No need to rinse the mixture. Allow to dry.

You can also clean the floor by spraying it with a spray bottle filled with a cleaner, then wiping it with a mop. You will have to rinse the mop in the sink several times when it gets dirty, but this way you don't need to throw away the solution that isn't used.

5. DIY Vinegar Floor Cleaner

Homemade Vinegar Floor Cleaner Recipes

- ½ cup of warm water
- ½ cup liquid dishwashing soap
- 1 2/3 cup baking soda
- Two tablespoons of distilled white vinegar

The white vinegar that you have at home is very flexible in doing everything, from making pickled tarts to sparkling mirrors. It's also great for cleaning various types of floors. Strong enough to remove dirt and dust without damaging the coating, even as a natural tile cleaner. Make it more efficient by adding a little liquid dishwashing soap and baking soda.

Add the ingredients together, stir until all the groves dissolve. Pour the mixture into a spray bottle. Working in small parts, spray the solution to the floor and clean it. Be sure to rinse the floor thoroughly with clean water to avoid leaving scratches.

6. Homemade Natural Floor Tile Cleaners

Natural Tile Floor Cleaner Recipe

- One gallon of hot water
- ¼ cup white vinegar
• 1 cup baking soda
• 1 cup of ammonia

If you have tile floors at home, you can use some ordinary household materials to clean the layers of dust, dirt, and dust. This tile floor cleaner will help remove dirt while gently cleaning the tile. The best part is they will not leave soap residue. You can eliminate the need for stronger commercial floor cleaners by using this cleaner every week.

Fill a bucket with ingredients, stir well to dissolve baking soda. Pour the mixture into a spray bottle. Work one section at a time, spray cleaning directly on the tile. Mop the floor using a bucket of one glass of vinegar and ten glasses of hot water. Let time dry up.

Cleaning the floor with a natural home-made floor cleaner is the best way to be environmentally friendly at home. Using natural ingredients in the kitchen and essential oils give your whole house a clean and fresh aroma while getting rid of dirt, bacteria, and germs.

1.2. Outcome

Expected outcome of this activity are:

1. This activity can increase knowledge about understanding the manufacture of dish soap for household needs in the context of budget efficiency.

2. This activity can provide additional income related to making dish soap for sale.

3. This activity will be disseminated and submitted to the Journal of Community Service Programs

CHAPTER III IMPLEMENTATION OF METHODS

METHOD OF ACTIVITIES

The purpose of community service can be achieved through the implementation of the following:

1. Inviting PKK mothers in South Meruya Village to provide time in accordance with this activity, namely counseling on making household soap dish in Karang Taruna, South Meruya Village.

2. Conduct counseling with Material:
   1. Manage household budget
   2. Understanding the manufacture of dish soap for households
   3. Repair of household electronics

3. Community service activities are carried out by means of counseling and demonstration which is located in Karang Taruna, South Meruya Village

AUDIENCE TARGETS

The right target audience in this activity is the PKK housewives in the South Meruya District of 30 to 50 PKK mothers.

1.2. Evaluation design.

Evaluation of the implementation of this service is carried out as follows:

1. Ask for responses to respond to budget difficulties in the case of housewives

2. Ask the extension participants to try the teaching aids, which are to make efficient hygienic dish soap

3. Trying to make dish soap fix household tools provided by the community service team.

4. Conduct interviews and observation of housewives on household dish soap

1.3. Plan and Schedule of Activities
Extension activities will be carried out at

Day: February 28th, 2021

Time: 09-11.00 WIB

Place: Youth cadets in North Village
CHAPTER IV
